DATE MAILED: 10/05/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/817,645	Applicant(s) LYNAM ET AL.	
	Examiner Ricky D. Shafer	Art Unit 2872	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 July 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 60-117 is/are pending in the application.
- 4a) Of the above claim(s) 83 and 85 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 60-82,84 and 86-117 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Applicant's arguments filed 07/19/2005 have been fully considered but they are not persuasive.

Applicant argues that the prior art to Tobin, Jr. does not disclose a reflective element assembly having a second reflective element being disposed at an outer, upper portion of the reflective element display.

The examiner is of the opinion that the second reflective element (32) of Tobin, Jr. clearly has an outer, upper portion, as well as an outer, lower portion.

In addition, the examiner is of the opinion that the second reflective element has its front, (center/peak) portion "generally" coplanar with the front surface of the first reflective element. See column 3, lines 42-48.

Moreover, the examiner is of the opinion that there is a demarcation element, represented by element 40, between the first and second reflective elements.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 60-62, 64-66, 69-76, 92, 95-98, 100-102 and 104-107 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tobin, Jr ('952) in view of Holt ('539).

Tobin, Jr discloses an automobile exterior side view mirror system comprising an exterior side view mirror assembly (10) adapted for attachment to a side of an automobile;

Art Unit: 2872

said exterior side view mirror assembly including a reflective element assembly (30,32);
said reflective element assembly including a first reflective element (30) having unit magnification and a second reflective element (32) having a curvature; said first reflective element and said second reflective element supported at a support element (35), wherein said support includes a frame (20) and a backing plate (14); said second reflective element disposed at an outer, upper portion as well as the lower portion of said reflective element assembly when said reflective element assembly is included in said exterior side view mirror assembly and when said exterior side view mirror assembly is attached to the side of an automobile; said second reflective element supported on said support element adjacent to and separate from said first reflective element; a demarcation element (40) of a dark (red) color adjacent said first reflective element and said second reflective element; and wherein the portion of said second reflective element adjacent said demarcation element has a front surface generally coplanar with the front surface of said first reflective element, wherein the second reflective element inherently includes a rearward field of view having a principal axis which is different from a principal axis of the rearward field of view of the first reflective element due to the convex characteristics of the second reflective element which generally extends the rearview field of view outwardly and downwardly with respect to a longitudinal axis of the automobile, note Fig. 4 along with the associated description thereof, except for the demarcation element positioned between first and second reflective elements.

Holt ('539) teaches it well known to use a segment of a perimeter (bezel) portion to serve as a demarcation element in the same field of endeavor for the purpose of providing a clear

Art Unit: 2872

dividing line and/or demarcation between first and second reflective elements so as to provide a driver of a vehicle with a two separate views.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the perimeter (bezel) portion of Tobin, Jr to include an segment (demarcation element) between the first and second reflective elements, as taught by Holt, in order to provide a clear dividing line and/or demarcation between the first and second reflective elements so as to provide a driver of a vehicle with a two separate views as well as increasing the over structural strength of the exterior side view mirror assembly.

4. Claims 67, 68, 84, 103, 108-117 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tobin, Jr ('952) in view Holt ('539) as applied to claims 60-62, 64-66, 69-76, 92, 95-98, 100-102 and 104-107 above, and further in view of Enomoto ('166) or Mizuta et al ('302).

Tobin, Jr in view of Holt discloses all of the subject matter claimed, note the above explanation, except for an electrical actuator to adjust the orientation of the reflective element assembly.

Enomoto ('166) and Mizuta et al ('302) each teach it well known to use electrically operated actuator(s) in the same field of endeavor for the purpose of adjusting the position and/or orientation of a reflective element.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the reflective element assembly of Tobin, Jr to include electrically operable actuator(s) as is well known and commonly used and employed in the mirror art, as

Art Unit: 2872

taught by Oskam or Enomoto, in order to adjust the position and/or orientation of the reflective element assembly.

Moreover, it has been held that providing automatic means to replace manual activity, which accomplishes the same result, involves only routine skill in the art. Note In Re Venner, 120 USPQ 192.

As to the limitations of claim 84, it is well known to use breakaway exterior side view mirror assemblies in the same field of endeavor for the purpose of folding the position and/or orientation of a mirror. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the exterior side view mirror assembly of Tobin, Jr to include a break-away exterior side view mirror assembly, as is well known and commonly used and employed in the mirror art, in order to fold the position and/or orientation of the reflective element(s).

5. Claims 63, 77-82, 89-91, 93, 94 and 99 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tobin, Jr ('952) in view of Holt ('539) as applied to claims 60-62, 64-66, 69-76, 92, 95-98, 100-102 and 104-107 above, and further in view of Marhauer ('770).

Tobin, Jr in view of Holt discloses all of the subject matter claimed, note the above explanation, except for explicitly stating that the curved reflective element includes at least one radius of curvature in the range of about 4000 mm to about 100 mm.

Marhauer ('770) teaches it well known to select a curvature of a reflective element within the range recited by applicant in the same field of endeavor for the purpose of avoiding distortions.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the curvature of the curved reflective element of Tobin, Jr to include a value, as taught by Marhauer, in order to avoid distortions.

As to the limitations of claims 77-82, 89-91, 93 and 94, it is well known to use an a curved reflective element having downward and outward angles within the range recited by applicant in order to optimize and/or view a particular rearward field of view of interest.

Therefore, it would have been obvious and/or within the level of one of ordinary skill in the art at the time the invention was made to modify the curved reflective element of Tobin, Jr to include downward and outward angles within the range recited by applicant in order to optimize and/or view a particular rearward field of view of interest, based on user specifications.

Moreover, it would have been obvious to one of ordinary skill in the art at the time the invention was made to angle the curved reflective element of Tobin, Jr to the selected range(s) recited by applicant in order to view of particular rearward field of view of interest, since it has been held that where the general conditions of a claim are disclosed in the prior art or discovering an optimum or workable ranges involves only routine skill in the art. Note In re Aller, 105 USPQ 233 and In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

6. Claims 86-88 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tobin, Jr ('952) in view Holt ('539) as applied to claims 60-62, 64-66, 69-76, 92, 95-98, 100-102 and 104-107 above, and further in view of Bauer et al ('864) or Kanazawa ('367).

Tobin, Jr in view of Holt discloses all of the subject matter claimed, note the above explanation, except for the reflective element(s) being a variable reflectance (electrochromic) element.

Bauer et al ('864) and Kanazawa ('367) each teach it well known to use electrochromic mirrors in exterior side view mirrors in the same field of endeavor for the purpose of providing variable reflectance and/or reducing glare

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the reflective element(s) of Tobin, Jr to include variable reflectance (electrochromic) element(s), as taught by Bauer et al or Kanazawa, in order to reduce glare.

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

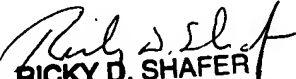

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ricky D. Shafer whose telephone number is (571) 272-2320. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published

Art Unit: 2872

applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
